Data Mining & Analysis on Amazon Datasets

Barmparosos Theofanis

February 21, 2026

Abstract

This report presents a comprehensive data mining and analysis study conducted on large-scale Amazon datasets. The project is divided into two complementary parts. Part 1 mainly focuses on Exploratory Data Analysis (EDA) and Sentiment Analysis to explore user reviews, ratings and the overall structure of the datasets. Part 2 involves text pre-processing, clustering of products to group them into subsets, a recommendation system and frequent pattern mining to uncover association rules and purchasing patterns. The work is focused on searching (mining) for useful and interesting information on large scale datasets, the characteristics of which we don't know a priori. The Amazon product categories that were used are the following five. "Appliances", "All_Beauty", "Musical_Instruments", "Software" and "Video_Games".

1 Project Structure and Technical Setup

This is a project that aims to accomplish an extensive and precise study on large scale Amazon datasets. All of the code is written in Python (v3.10.12) using Jupyter notebooks and is organized into two main parts, corresponding to the two analytical phases of the study. All required dependencies must be installed before running any of the notebooks with the following command at the root of the repository: `pip install -r requirements.txt` After installation, the notebooks can be executed.

2 Datasets

Datasets used in this project are from Hugging Face and concern Amazon products, including reviews and metadata collected in 2023 by McAuley Lab. Both parts use the same 10 csv files: two datasets, reviews and metadata, for each product category. The first few code cells in both notebooks download the datasets locally. One could use the max_rows variable to limit the datasets to an arbitrary number of rows, to save time and system resources. Full-size datasets are quite large and take up approximately 6.4GB of space.

3 Part 1: EDA & Sentiment Analysis

3.1 Introduction to Part 1

The objective of this part is to analyze the overall nature of the datasets, discover average prices, average ratings of the different categories, best and worst selling products and the relationship between user ratings and the textual content of reviews. Natural Language Processing (NLP) techniques are utilized to compute sentiment scores and correlate them with the star ratings.

3.2 Exploratory Data Analysis

After downloading, the datasets are used to create pandas DataFrames that can be later manipulated as desired. The main goal is to explore the nature of the datasets.

- At first, the notebook displays the average product price in each category.

Table 1: Average Product Price per Category

Category	**Average Product Price (USD $)**
Appliances	86.4799
Beauty	27.2557
Musical Instruments	127.7064
Software	2.9567
Video Games	45.7173

In order to ensure the whole dataset consists of valid data, one step of data preprocessing is performed now, before moving on with the rest of the EDA: handling

missing/bad values in the 'price' column. Further details in the Data Preprocessing section.

- A set of plots show the distribution of ratings in each category within the 5-star range. In other words, each plot shows how many 1-star, 2-star, 3-star, 4-star and 5-star ratings are there in each category's dataset. It becomes evident that across all product categories, the 1-star and 5-star ratings exhibit significantly higher frequencies compared to the intermediate ratings (2-4 stars). This pattern can be explained by the fact that customers are more likely to leave a review when they feel either extremely dissatisfied or fully satisfied with a product. In contrast, moderately satisfied users tend to provide feedback less frequently.
  Overall, an increasing trend is observed in the rating distributions, indicating that positive reviews (4 and 5 stars) outnumber negative ones (1 and 2 stars).

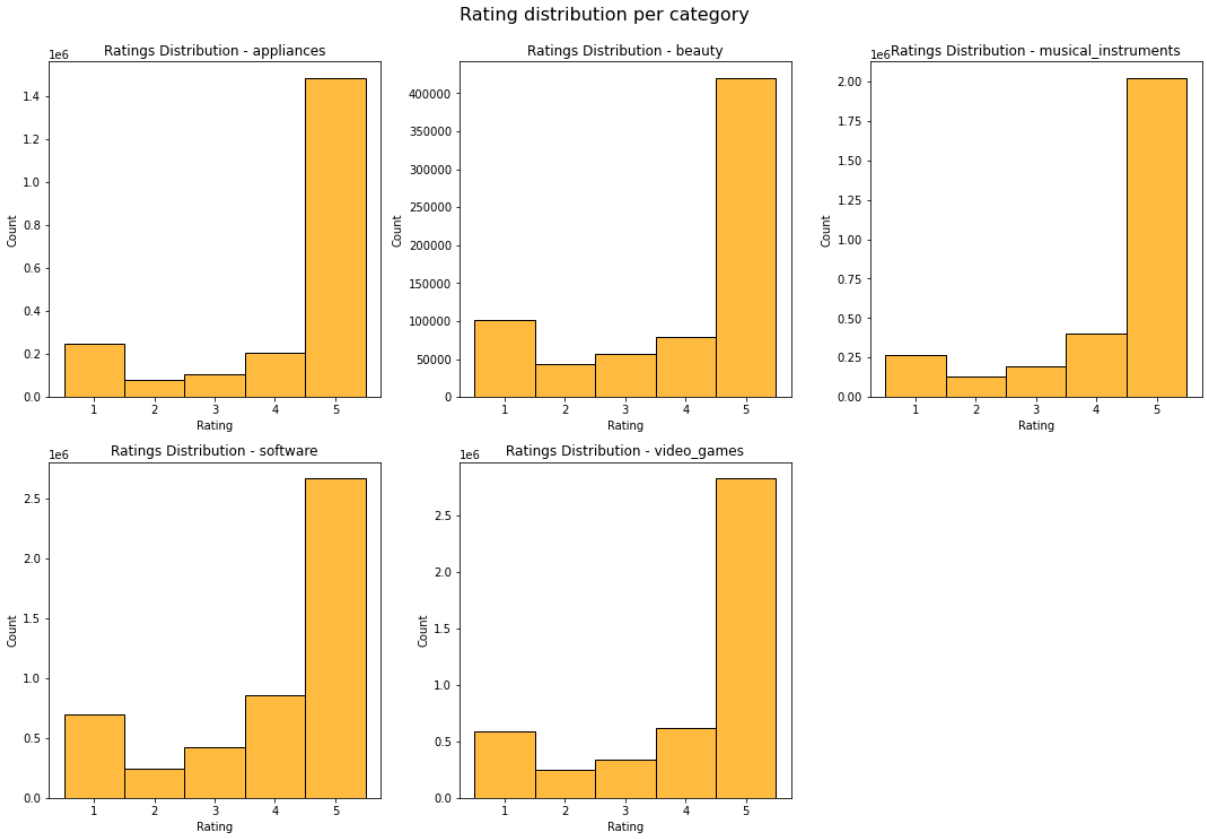

Figure 1: Distribution of ratings in each category

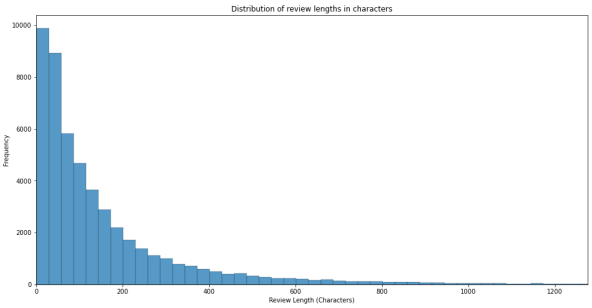
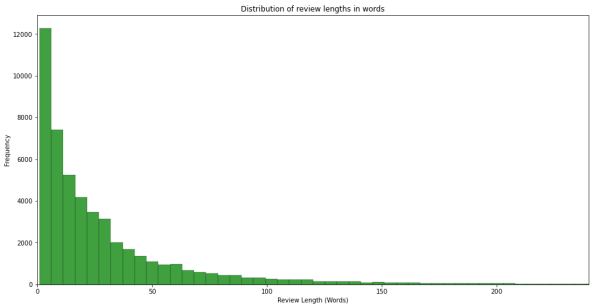
- 2 plots per category follow, showcasing the distribution of review lengths both in words and in characters.

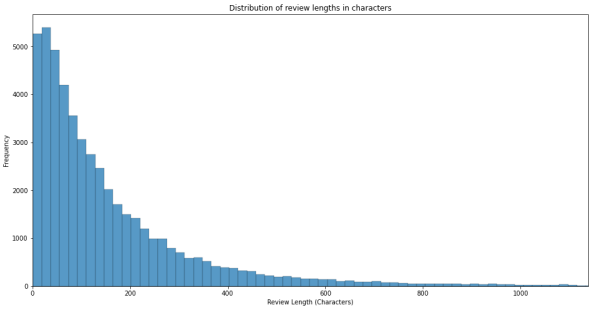


(a) Character Count



(b) Word Count

Figure 2: Review Length Distribution for Appliances



(a) Character Count

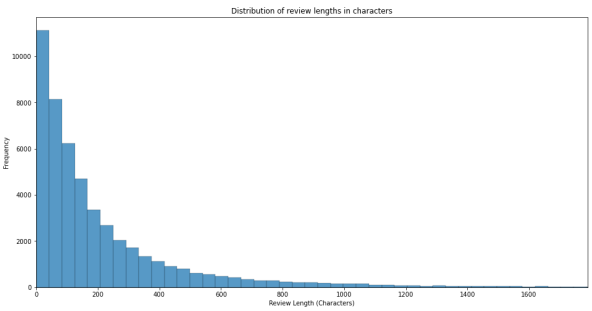
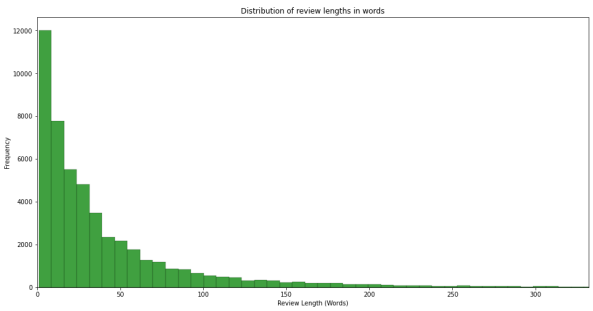
Figure 3: Review Length Distribution for Beauty

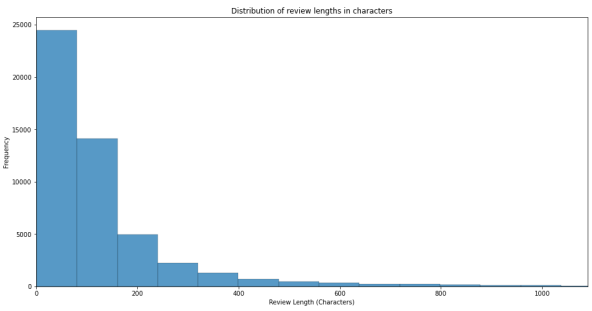


(a) Character Count

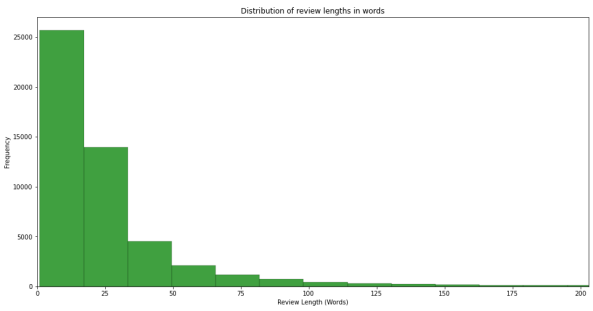


(b) Word Count

Figure 4: Review Length Distribution for Musical Instruments

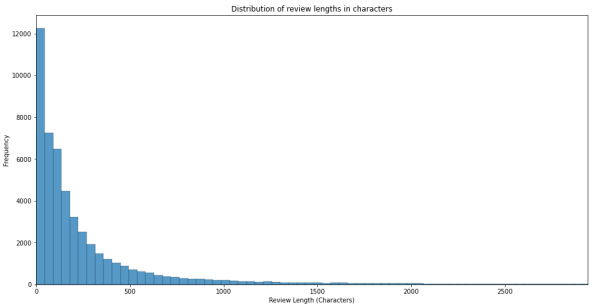


(a) Character Count

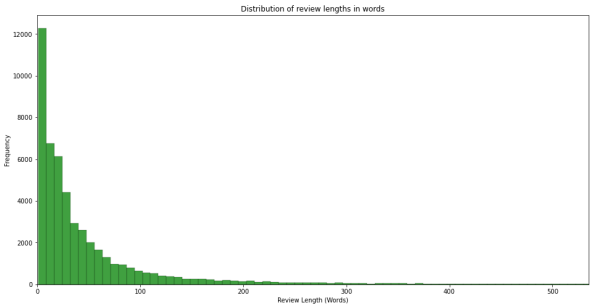


(b) Word Count

Figure 5: Review Length Distribution for Software



(a) Character Count



(b) Word Count

Figure 6: Review Length Distribution for Video Games

- Average product rating is displayed for each category.

Table 2: Average Product Rating per Category

Category	**Average Product Rating(0-5)**
Appliances	4.2215
Beauty	3.9602
Musical Instruments	4.2555
Software	3.9350
Video Games	4.0474

3.3 Data Preprocessing

- All missing price values are replaced with the mean price value.
- All bad values or NULL values are replaced with the mean price value.
- All html elements are removed from the text column of the reviews(e.g. &amp).

After experimentation, it was found that no other pre-processing was necessary for this part.

3.4 Product Performance Analysis

In this section, an attempt is made to find the best selling products and the worst sellers. To be more specific, Best sellers are the products with high review count and high ratings, whereas worst selling products are those with a high review count but quite low rating. Starting off with the worst sellers, the 10 'worst' products are presented for each category, along with a WordCloud plot per category, to display commonly used vocabulary in the reviews of such products.

- Appliances:
    1. B01CBWDY0C: Nespresso Capsules Refillable - Reusable Coffee Pods For Nespresso Cups - OriginalLine Compatible - Pack of 6 (reviews: 938, avg rating: 3.00)
    2. B081K5T5HB: Deflecto Magnetic Vent Cover, For Sidewall and Floor Vents, 5" x 12", 3 Pack (MVCX512),White (reviews: 896, avg rating: 2.51)

3. B0000CF4DJ: Harold Coffee Tools Filter Separator (reviews: 749, avg rating: 2.87)
4. B08WH5XL86: RCA RFRF450-AMZ, 5.1 Cubic Foot Chest, Deep Freezer Cold Storage for Food, White (reviews: 691, avg rating: 2.77)
5. B09JY77GCY: GE Profile Opal — Countertop Nugget Ice Maker with Side Tank — Portable Ice Machine Makes up to 24 lbs. of Ice Per Day — Stainless Steel Finish (reviews: 675, avg rating: 2.85)
6. B09B18P5RG: GE Profile Opal — Countertop Nugget Ice Maker — Portable Ice Machine Complete with Bluetooth Connectivity — Smart Home Kitchen Essentials — Stainless Steel Finish — Up to 24 lbs. of Ice Per Day (reviews: 501, avg rating: 2.78)

  4. Xbox Live Gold: 1 Month Membership [Digital Code] (ASIN: B000N5Z2L4 — Verified Reviews: 12805)
  5. Grand Theft Auto V: Premium Edition - Xbox One [Digital Code] (ASIN: B0086VPUHI — Verified Reviews: 10856)

3.5 Sentiment Analysis Methodology

Explanation of the sentiment scoring approach (e.g., using VADER, TextBlob, or custom lexicons).

```
def get_sentiment(text):
    return score
```

Listing 1: Sentiment Score Calculation

3.6 Results: Ratings vs. Sentiment

Analysis of the correlation between the numerical rating (1-5 stars) and the calculated sentiment score.

Figure 7: Heatmap of Review Sentiment vs. Ratings

As shown in Figure 7, we observe a strong correlation in the "hot" zones (high rating, high sentiment), indicating that... [Insert your observation about the south-east/north-west consistency here].

4 Part 2: Product Analysis, Clustering and Market Basket Mining

4.1 Introduction to Part 2

Overview of the objectives of Part 2, including product-level text processing, clustering, recommendation logic, and association rule mining.

4.2 Dataset Preparation and Text Preprocessing

Description of the preprocessing pipeline applied to product metadata and review text.

- Text normalization (lowercasing, punctuation removal)
- Expansion of contractions
- Spell correction
- Stopword removal
- Vectorization using TF–IDF

4.3 Feature Extraction

Explanation of how textual features are transformed into numerical representations suitable for machine learning models.

4.4 Product Clustering

4.4.1 Clustering Methodology

Description of the clustering approach (e.g., K-Means) and distance metrics.

4.4.2 Cluster Selection

Explanation of the elbow method and justification of the chosen number of clusters.

4.4.3 Cluster Interpretation

Qualitative analysis of resulting clusters and their thematic coherence.

4.5 Cluster-Based Recommendation Strategy

Description of the recommendation logic based on cluster membership and product similarity.

4.6 Association Rule Mining

4.7 Temporal Pattern Analysis

Focused analysis on December transactions to capture seasonal purchasing behavior.

5 Conclusion

Summary of the findings from both parts.

- **Part 1 Summary:** Sentiment analysis confirmed that...
- **Part 2 Summary:** Market basket analysis revealed that...
